How safebotic are you?

Safebot uses -

Artificial intelligence to learn from human behavior and provide proper calculations that build on a personalised pattern based on evaluation of:

- Kinect Properties
- Sound Levels
- Mobility Rates
- CO2 Concentration Rates
- Area Comfort

How safebotic are you?

Safebot delivers -

High safebotic protection. It can automatically detect possible life-threatening incidents such as burglary or a fall.

Safebot can detect area abnormal activity levels such as temperature and humidity levels. It instantly reacts by sending alarm notifications to guardians, without any manual interaction via mobile or internet.

The Safebot can also compliment any existing alarm system by operating sepearately.

How safebotic are you?

The facts -

When we read about a burglary our first thought is that fortunately the residents were not inside. However, things are quite different when a burglary occurs, and residents are caught off-guard inside.

Statistics show that there are 2.5 million burglaries occur each year with a 25% cases to end up with victims because residents were inside the intruded area.

How safebotic are you?

The solution -

We offer a unique solution for protecting your loved ones in case their life is threatened during a burglary or due to a fall, or any other abnormal incident occurring inside the protected area.

Safebot is a standalone safebotic patented product which offers protection 24/7 and a secure feeling all day long.

It automatically triggers alarms whenever it detects abnormal human behavior or area situations

Why Safebot?

Beacuse -

It is a unique learning protection system that addresses real-life safety issues when a burglary occurs by dramatically reducing the risks for victims caught inside.

It is a plug-n-play installation offered at a low cost, with the ability to operate either as stand-alone or complimentary to an external alarm system, raising alarms in real time.
